

Master Grounding Kits

As a manufacturer of best in class aluminum radiators for over 30 years, we can tell you with confidence that only a very small percentage of customized vehicles are grounded properly. Poor grounding leads to all kinds of difficult to troubleshoot problems. Poor grounding can also promote electrolysis, which can lead to the failure of an aluminum radiator, head gaskets, or intake gaskets.

Our Master Grounding Kits have been designed to eliminate the guesswork and provide you with the exact parts you need to get the job done right the first time. In addition, they are a vital component in preventing electrolysis damage to cooling system components.

Our grounding kits include the right selection of cables and parts as well as full color step-by-step instructions so that you can easily install them!

We offer them for import or domestic vehicles with front or rear located batteries. Each kit includes the following:

Assortment of Pre-Made Cables

Each of the included cables is assembled from tinned Oxygen Free Copper (OFC) wire which meets the American Wire Gauge (AWG) specification. All ring terminals are super thick tin-plated stock. Tinned cable and tin-plated ring terminals provide excellent resistance to corrosion and oxidation, which can cause standard cables to break down over time. Finally, all terminations are insulated with adhesive lined heat shrink tubing to keep the elements out ensuring that they'll hold up for the long haul. No shortcuts here!

ALL of the Hardware You'll Require to Install the Kit

We're a stickler for details so we also include the exact Grade 5 hardware required to achieve the best possible connection between the cable and grounding point – including zinc plated internal / external star washers for every mechanical connection. This ensures a trouble free installation for years to come.

Step-By-Step Instructions

Full color photos will guide you every step of the way. No special tools are required to install our kits – just common every day hand tools and a 3/8-16 tap.

Our Master Grounding Kits exude the exact level of quality our customers have come to expect of Ron Davis Racing Products and they work! We can't recommend them highly enough. Call to place your order today!
